# INSTRUCTION MANUAL FOR LOCK M901

Lock M901 is a "public" (Free locker) lock. The combination may therefore, be changed after each time the lock is opened.

Suitable for steel cabinets or wood cabinet by use of extra back plate.

How to set the combination code:

1. All locks are pre-set with combination code "0000"
2. Turn the knob clockwise 90 degree to the "open" position. Turn the code wheels to set a new combination code. Then turn the knob to "close" position. Now the new combination code is valid.

How to decode the forgotten combination:

1. Use master key to open the lock.
2. After opening the lock, push and hold the button on the back of the lock. Then turn the code wheel to find the matching code. If the number is matching, then the button will be pushed further/completely down. Repeat until all 4 wheels/numbers are matching. The forgotten combination code is hereby found.
3. After finding the forgotten code turn the knob to "OPEN" position. Now the lock is ready to be used again.
